OLAF issues the licenses for payment cards which are valid and accepted in European Union member states, according to Visa Europe and the European Commission. This means that virtual VisaPay cards will be available to cardholders as well as merchants and service providers in all European Union member states. “With this approval, Visa is looking forward to offering consumers and businesses in the EU a simple, fast and secure way to manage their payments online,” said Martin Lee, Chief Executive Officer of Visa Europe. “This is the world’s largest single payment network; it has always been a goal of Visa’s to offer a VisaPay card and this important development gives consumers and businesses more choice across the EU.” Visa Europe and its licensees will continue to develop and implement VisaPay in Europe to meet the needs of consumers and businesses.Q: How to get instance name in Python from multiple Pandas DataFrames I have around 45 dataframes in which I get the Instance name from the dataframe metadata. However, I only need to use the name of the first dataframe, the

rest won't be used. Does anyone know how to get the instance name from multiple dataframes? I tried to loop through the dataframes but it doesn't seem to work. `df = pandas.read_table(file, sep="\t", names=["Some_Name", "Some_Name2", "Some_Name3"])`
`df['Instance Name'] = df.metadata.get("instance-id")` `print('Instance Name:', df.index[0], '')` Output: Instance Name Name 0 None A: All right, there's
